About me

Developing and improving testing processes in QA team.
B2 level of English (reading technical documentation).
Onboarding new employees and mentoring them.
I enjoy traveling light around the world :)

You can find my certificates, Python projects, CV and examples of test documentation on my GitHub: https://github.com/nazmedinov

My knowledge includes:
- Testing theory: test design techniques, types of testing, network principles, requirements analysis
- Client-server architecture: components, HTTP methods, error codes, database usage
- Development methodologies (SCRUM, KANBAN), understanding of team workflows
- Frontend and backend functional testing of mobile and web applications

My skills include:
- Maintaining test documentation: test case collections (test runs in TestRail) and checklists, test plans, testing reports, QA artifacts of projects, internal regulations, and process improvement recommendations;
- Reporting bugs and improvements in JIRA, monitoring errors in Sentry, log analysis in Kibana, Grafana, and Logcat, communication with developers, customers, and analysts;
- Organizing and conducting project regressions;
- Linux command line: cd, rm, cp, cat, sudo
- Test automation: reading Allure reports, updating API and acceptance tests at a medium level, ci/cd

My expertise includes:
- SQL: simple queries, including JOIN
- PYTHON: at the level of implementing Telegram bots with a connected SQLite database
- SOAPUI: loading WSDL, working with parameters
- POSTMAN: creating and supporting collections, keycloak authorization, test scripts
- DevTools: requests and responses in Network, elements in Elements, cookies in Application, monitoring Console
- CHARLES: mapping, rewrite, breakpoints

- JMETER: at the level of generating simple reports
- GIT: fetch, pull, add, commit, push
- Android Studio, Xcode, BrowserStack
